Fitting charge		£2 10 0		£2 10 0		15 0

(†—rear only)

Prices quoted are for a set of two valves. State whether front or rear.

* Speedwell shock absorbers are available for all vehicles fitted with telescopic type dampers as standard equipment.
pair **£8 15. 0d.**

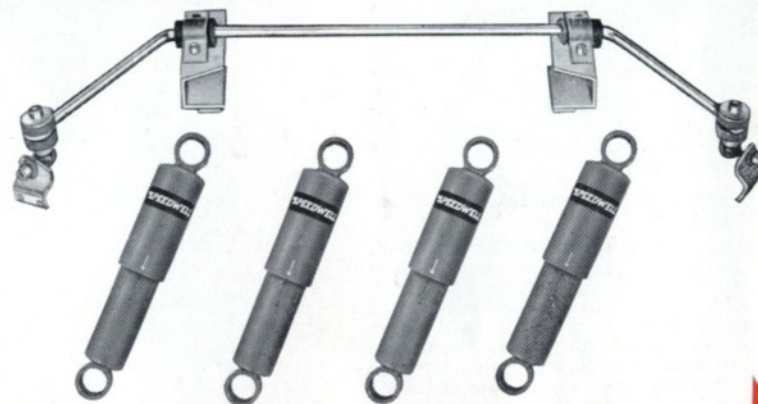

Fitting charges :
Though fitting charges quoted in this leaflet only apply to our own works, they give a good indication of the approximate charges elsewhere.

How to Order :
Speedwell suspension equipment may be purchased from BMC dealers, specialised tuning shops, Speedwell stockists as well as direct. Always quote vehicle make, type number, etc. This is very important, especially when ordering telescopic as there is a special setting for each car.

AND PERFECT RIDE CONTROL

SPEEDWELL

SUSPENSION EQUIPMENT

What is Speedwell Suspension

Equipment? There are two main items: anti-roll bars and telescopic shock absorbers. Both have been carefully designed to improve road-holding in relation to spring rate, laden weight, performance and steering characteristics, and have been produced after exhaustive tests under both normal road and race track conditions.

Exactly what improvements can be expected?

Big immediate advantages are the reduction in body roll and the increased riding comfort. Passengers no longer need to "brace" themselves for every corner. Faster yet safer average speeds can be maintained with less effort. In addition, steering "feel" becomes more responsive, as any correction on the wheel is immediately effective without the usual lost motion due to initial body roll, an especial benefit with vehicles tending to oversteer. Speedwell telescopic shock absorbers eliminate axle tramp and "float" at high speeds.

What does Speedwell Suspension Equipment consist of?

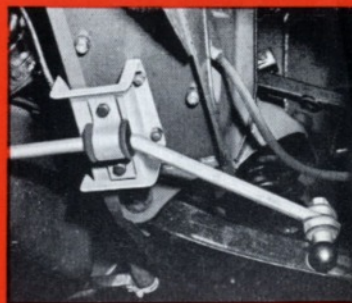

Speedwell Anti-Roll Bars:

High grade spring steel bars, finished in aluminium resin to resist corrosion, designed to fit each vehicle without affecting ground clearance. Supplied complete with knuckle joints, brackets, rubber bushes, nuts and bolts, strengthening boxes where required, and full fitting instructions. One year guarantee. See back page.

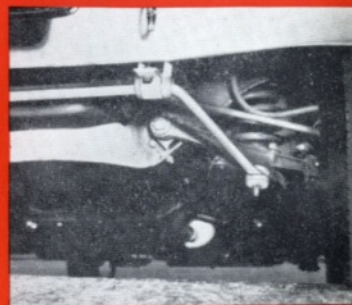

Speedwell Wito-system Telescopic Shock Absorbers:

Double acting adjustable telescopic shock absorbers are supplied complete with mounting brackets (conversion kits only), rubbers, fitting instructions, etc. Shock absorber casing is made of cold drawn seamless heavy gauge steel tube, control valves are of high duty spring steel, all hydraulic passages are precision machined, and flow tested prior to assembly. Brackets where supplied are made of steel castings and machined. It is not possible to fit Speedwell telescopic shock absorbers on all cars. Others can only be fitted on the front or the rear. For these vehicles we are able to offer special shock absorber valves which can be fitted to the existing lever type shock absorbers—full details on back page.

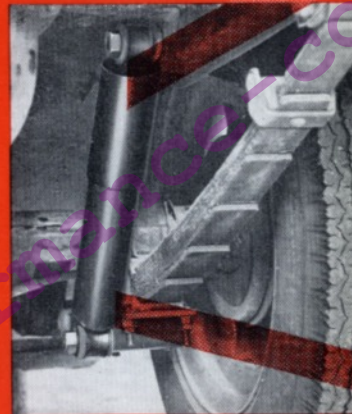

Speedwell Suspension Equipment for a smoother, steadier, safer ride—no matter what you drive.

A.1 anti-roll bar fitted to A.35

BMC.1 anti-roll bar fitted to A.55 Mark II, etc.

M.TK rear telescopic kit on Minor 1000

M.1 anti-roll bar fitted to Minor 1000

SPEEDWELL

DOUBLE ACTING TELESCOPIC SHOCK ABSORBERS

SILENT • PROGRESSIVE • ADJUSTABLE • GUARANTEED FOR TWO YEARS

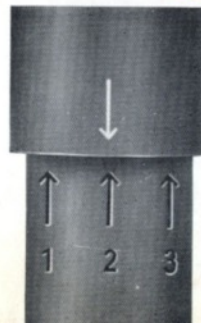

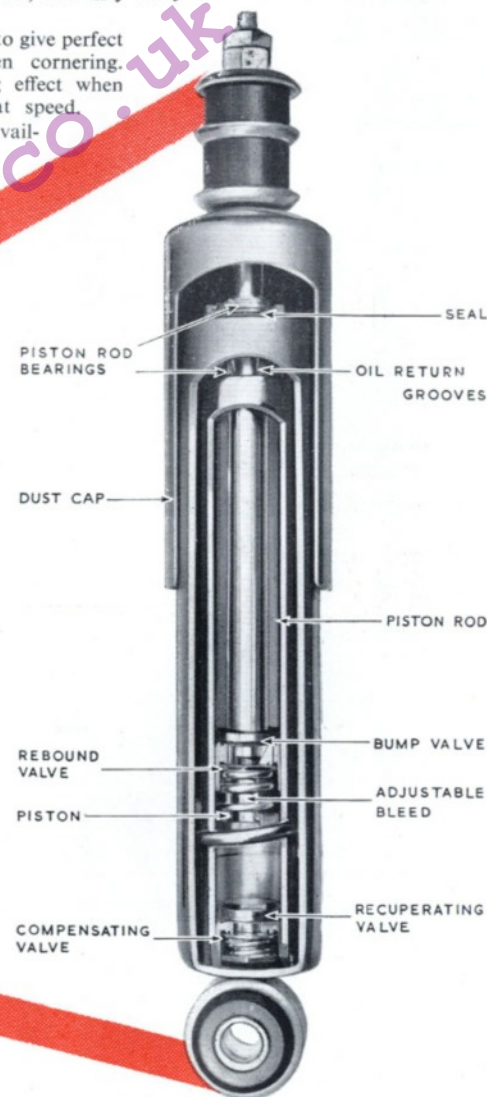

Speedwell Wito patent shock absorbers not only last four times longer, they will not leak, break or go soft, and they carry a unique two years guarantee.

The hydraulic system is regulated to give perfect road holding and wheel adhesion when cornering. There is no axle tramp or wallowing effect when driving over irregular road surfaces at speed.

Speedwell shock absorbers are available for all cars originally fitted with telescopic and, in the form of conversion kits complete with brackets, for current BMC cars, Ford 105 E, etc. See details overleaf.

Wito patent adjustable bleed system

Four settings allow wear to be compensated or, alternatively, these adjustments can be used to vary the ride characteristics from soft to hard according to preference and the type of driving envisaged. With the damper fully closed a projection on the bleed valve sleeve engages with a notch in the base valve assembly. By turning upper part of casing a single hole in the bleed valve centre can be lined up with any of four graduated holes. "Click" action ensures correct alignment. Positions are marked by numbers 1 to 4 on shock absorber body.

£8 15. 0d. per pair

Speedwell telescopic shock absorbers are available for

AC, Alfa, Alvis, Austin, Bedford, Borgward, Buick, Citroen, DKW, Fiat, Ford, Gogo, Hillman, Humber, Jaguar, Jensen, Javelin, Mercedes, Morris, Nash, Opel, Porsche, Renault, Riley, Rover, SAAB, Simca, Singer, Standard, Sunbeam, Triumph, Vauxhall, Volkswagen, Volvo, Wolseley, etc.
