

SPEEDWELL

SPRITE

Fashioned in aluminium by skilled craftsmen, the elegant bonnet harmonises with the existing lines of the Sprite and utilises all the existing lighting and signalling equipment. Spring-loaded catches firmly locate the FRONT hinged unit, which gives maximum engine compartment accessibility and a total weight of only 38 lb. Improved cooling, streamlining and rigidity are inbuilt advantages of the Speedwell bonnet.

The Speedwell hardtop is also made of aluminium incorporating a double curvature wrap-round laminated windscreen and toughened back light, light alloy removable side-screens with perspex ventilating windows. The Speedwell G.T. hardtop is supplied with interior trim and is designed as a permanent fixture.
